SUMMARY

Junior Data Engineer with hands-on experience building ETL/ELT pipelines, cloud-based analytics workflows, and scalable backend systems using Python, SQL, BigQuery, Docker, and GCP. Experienced in workflow orchestration, data transformation, analytics infrastructure, and production-scale systems supporting high-volume workloads.

EXPERIENCE

SmartRep.ai March 2025 – Present
AI/ML Backend Developer & Data Engineering Contributor Remote

- Designed and implemented a scheduled batch-streaming ETL pipeline using BigQuery scheduled queries, SQL CTEs, and aggregations executing every 5 minutes.
- Led migration from Looker Studio to Power BI, reducing analytics infrastructure costs from **3.5K/month to 50/month**.
- Built and maintained scalable Python backend services supporting conversational AI systems handling **50K+ daily user interactions**.
- Developed cloud-based automation workflows using Dialogflow CX, Google Cloud Functions, and GCP services supporting **225+ stores** and **25K+ daily calls**.
- Collaborated with engineers on production-grade AI and backend systems integrations for enterprise clients including Groupama Insurance.
- Worked with SQL-based aggregations, cloud workflows, API integrations, and analytics-oriented processing pipelines in production environments.

Hellenic Mediterranean University Sept. 2024 – March 2025
Data Engineer / System Administrator Heraklion, Greece

- Provisioned and maintained environments supporting Data Science and Backend Engineering workflows.
- Participated in migration of Oracle databases to PostgreSQL, transforming and filtering user data for downstream analysis and processing.
- Supported infrastructure and database operations for academic and engineering environments.

PROJECTS

End-to-End Data Engineering Pipeline on GCP

- Designed and implemented an ELT pipeline using Python and dbt to ingest, transform, and aggregate datasets into BigQuery warehouse tables.
- Provisioned Google Cloud infrastructure using Terraform, including service accounts, virtual machines, and storage resources.
- Deployed and containerized Apache Airflow using Docker on GCP to orchestrate scheduled workflows and monitor pipeline execution.

– Built a Streamlit dashboard for exploratory analytics and visualization of aggregated datasets.

Stock Market Prediction using ML and Neural Networks

– Developed a Streamlit application enabling users to train and evaluate machine learning models including Linear Regression, SVM, MLP, CNN, and LSTM for stock forecasting.
– Implemented data preprocessing and model evaluation workflows using Python-based ML pipelines.

EDUCATION

Hellenic Mediterranean University 240 ECTS
Bachelor of Engineering in Informatics Engineering Heraklion, Greece

SKILLS

Data Engineering: Python, SQL, PostgreSQL, BigQuery, dbt, Apache Airflow, ETL/ELT Pipelines, Data Transformation, Data Warehousing

Cloud & Infrastructure: Google Cloud Platform (GCP), Docker, Terraform, GitHub Actions, Cloud Functions

Backend & APIs: Python Backend Development, REST APIs, Rasa, Dialogflow CX

AI Engineering: Langchain, Claude SDK, Claude API, OpenAI API,

Analytics & Visualization: Power BI, Looker Studio, Streamlit

Tools: Git, GitHub, ClickUp, Microsoft Teams, Miro

Languages: English (C1), Greek (Native), German (A1), Albanian (B1)
